CHAMPION WAFER CHECK VALVES · SIZE RANGE: 2" — 48" · ASME CLASS: 125 — 2500

MATERIALS: CAST IRON · CARBON STEEL · STAINLESS STEEL · ALUMINUM BRONZE · ALLOY 20 · MONEL · NICKEL

CHAMPION VALVES, INC.

DUAL DISC SPRING LOADED WAFER CHECK VALVES

FEATURES	BENEFITS
<ul style="list-style-type: none">• Light weight, versatile design — 80% to 90% less than conventional full-body swing check valves	<ul style="list-style-type: none">• Simplifies piping• Reduces thermal and seismic considerations• Optimizes space utilization• Lowers installation costs• Reduces pipe supports• Requires less number of man-hours
<ul style="list-style-type: none">• Dual Disc open to 80 degrees	<ul style="list-style-type: none">• Low cracking pressure and overall pressure drop• Ensures positive closure
<ul style="list-style-type: none">• Spring-loaded discs calculated to increase the responsiveness of the disc	<ul style="list-style-type: none">• Alleviates water hammer and resultant damaging effects
<ul style="list-style-type: none">• Extended long-leg spring	<ul style="list-style-type: none">• Prevents seat wear caused by scrubbing

GENERAL APPLICATION

- General service piping systems
- Water, oil, gasoline
- Gas (compressible gases)
- Air (compressed air and blower)

INSTALLATION

Champion wafer check valves are designed for installation in flanged piping systems, between two flanges. Valves may be installed in vertical or horizontal piping. Care must be taken to always install the valves with the shafts in a vertical position when installing in a horizontal pipeline. Vertical up flow is always a good installation. Consult factory for vertical down flow.

To insure maximum service life it is recommended to have 5 pipe diameters of straight pipe in front of the valve. Champion wafer check valves are designed to provide long service life if the velocity is kept within the flow rate shown in the table on page 7 and if a minimum of 5 pipe diameters of straight pipe is maintained downstream from a likely cause of turbulence (i.e., pump discharge, reducers or elbows).

INDUSTRY STANDARDS

- ASME B16.1, B16.5, B16.34, B16.47 and B31.1
- API 594 and 598 • MSS-SP-25, MSS-SP-55
- API 6A and 6D (as applicable) • MSS-SP-61 (standard for the resilient seated, metal seated when required)

*Approximate weights and dimensions—Apply for certified drawings. Dimensions available with DIN, JIS, AS and ISO. Sizes above 24" per ASME B16.47 Series A. Series B available if required.

PRESSURE DROP CALCULATIONS FOR GAS

Pressure drop for gas media across Champion Wafer Check (in horizontal installation) can be determined using the following equation and Cv and Cracking Pressure shown for each valve size. Additional equations may be necessary in order to calculate the pressure drop.

AMERICAN STANDARD (Horizontal Installation)

$$\Delta P = \frac{GT}{P} \left(\frac{Q}{1360 C_v} \right)^2 + P_c$$

Where:

- Cv = Flow Coefficient
- G = Specific Gravity of Gas
- P = Inlet Pressure, in psia (psig + 14.7)
- ΔP = Pressure Drop Across Valve, in psi
- Pc = Cracking Pressure
- Q = Gas Flow Rate, in SCFH
- T = Temperature, Absolute (°F + 460)

$$SCFH = ACFH \left(\frac{P}{14.7} \right) \left(\frac{520}{T} \right)$$

Where:

- ACFH = Actual Cubic Feet per Hour
- SCFH = Standard Cubic Feet per Hour

TECHNICAL DATA

C_v & CRACKING PRESSURE

Size	C _v	Pressure
2"	48	0.220
2.5"	77	0.189
3"	135	0.098
4"	270	0.184
5"	450	0.200
6"	720	0.218
8"	1400	0.162
10"	2600	0.230
12"	3850	0.241
14"	5000	0.230
16"	7250	0.210
18"	10,000	0.138
20"	12,400	0.128
24"	20,400	0.098
30"	38,000	0.099
36"	60,000	0.095
42"	89,000	0.090
48"	124,000	0.088

Application specific spring torques are available.

PRESSURE DROP CHART. This chart is based on flow of clean water at ambient temperature. Consult our engineering department for pressure drop information for steam, gases or viscous fluids. Consult factory for pressure drop of sizes larger than 48 inches.

GOOD PIPING PRACTICE

recommends placement of check valves a distance equal to 5 pipe diameters from any turbulence producing device such as elbows, pumps, etc.

RECOMMENDED FLOW RATE RANGES FOR HORIZONTAL INSTALLATION ONLY

Media	Flow Rate
Liquid	3 to 11 feet/second 0.91 to 3.35 m/second
Gas	20 to 250 feet/second 6.1 to 76.2 m/second
