

ZMesh

ZMesh is a one of a kind heating element that is made to go **ON** a wood or concrete sub floor and directly **under** any non-conductive floor covering. The ZMesh requires no floor build up, and can be nailed or stapled through provided it does not come in contact with any other electrically conductive material. This ability makes it the most durable heating element available. This product is great for medium to large areas.

Applications: Under hardwood, tile, carpet, stone, linoleum/ vinyl, etc. on wood or concrete sub-floors.

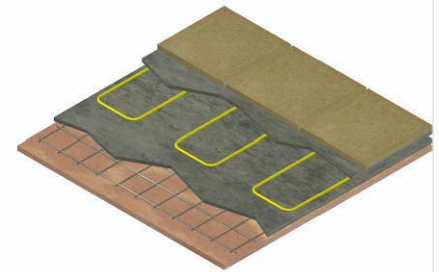

Area: 15 to 750 square feet, with 2 inch spacing between runs.

Watts per square foot: 7 to 9.5

Tuff Cable

The Tuff Cable is made to go **IN** a concrete, mortar bed, or thin set application, and is perfect for medium to large areas. This product is designed for tile, slate, stone, stamped concrete, travertine, and other mortar installations.

Applications: Under hardwood, tile, carpet, stone, etc. in a mud bed on wood sub-floors, or in concrete sub-floors.

Area: 7.5 to 450 square feet, with 6 inch spacing between runs.

Watts per square foot: 7 to 15

Floorizwarm

Floorizwarm is a small System designed for areas of 10 to 110 square feet. It, like the tuff cable is also made to go **IN** a thin set or mortar application. This system is perfect for bathroom floors. The Floorizwarm system includes the Tuff Cable heating element, the Power Unit, and a Programmable Thermostat.

Applications: Under hardwood, tile, carpet, stone, etc. in a mud bed on wood sub floors, or in concrete sub-floors.

Area: 15 to 110 square feet

Watts per square foot: 10 to 15
